SUMMARY

Software Engineer with experience building distributed processing and test-infrastructure systems in financial services. Designed and developed core components of an event-driven architecture leveraging Kafka, handling 1M+ daily transactions spanning multiple business divisions at Morgan Stanley and delivered multi-agent, RAG-based automated code analysis system adopted across Shareworks

WORK EXPERIENCE

Morgan Stanley

Technology Associate

01/2026 – Present

Bangalore

- Designed and implemented the Kafka-based remote-partitioning batch job for the event-driven architecture consolidating 5 stock-plan platforms, including Shareworks, E*Trade and NQDC; scaled batch processing from 20K to 1M+ daily transactions, improved processing performance by ~70%, and enabled adoption across 14 additional jobs.
- Improved distributed batch platform reliability and service-integration capabilities using backpressure monitoring to detect consumer lag and p95/p99 latency monitoring to identify downstream service slowness; integrated gRPC grant-detail retrieval used across processing workflows.

Technology Analyst

08/2024 – 01/2026

Bangalore

- Developed code-to-test traceability across 200K+ classes & 18K+ integration tests for a multi-agent, RAG-based code-impact analysis system; automating identification of impacted code & tests and prioritized execution pipelines; reduced production defect leakage from 40% to ~2% across 50+ releases, preventing 200+ critical defects annually; standardized the validation approach across Shareworks.
- Built EJB2→EJB3 migration across 800+ production classes, redesigning cache load/eviction behavior and profiling memory usage with JProfiler to resolve DB-call bottlenecks; improved affected endpoint response times by 50–60% and reduced dividend processing from 2.5 hrs to 1 hr.

Technology Analyst Intern

01/2024 – 07/2024

Bangalore

- Built a Java/Spring Boot integration service to automate CasC Manifest transfers between Shareworks and FDC Portal, reducing manual processing by 80% through validated API-based workflow automation.

SKILLS

Languages & Frameworks — Java, Python, SQL, Spring Boot, Spring Batch, Flask, REST APIs, gRPC, HTML/CSS

Distributed Systems & Infrastructure — Kafka, Redis, Microservices, Docker, WebLogic, Ansible

Tools & Observability — Jenkins, JaCoCo, Integration Testing, Splunk, Gradle, Git, Bitbucket, Jira

AI/ML — GenAI, RAG, Multi-agent Systems, Copilot

Practices — System Design, Performance Optimization, Fault-Tolerant Design, Code Impact Analysis, Caching

EDUCATION

Bachelors of Engineering in Computer Science

2020 – 2024

Dr. Ambedkar Institute of Technology

Bangalore

8.95 CGPA

AWARDS AND PROGRAMS

Katalyst Program

05/2024

4 year women-in-engineering leadership program; built Azure hackathon solutions via Microsoft Girls Go Ready; mentor junior engineers from the program

JPMC Code for Good 2023 Winner

07/2023

Python image classifier for road-damage categorization with geotagging, built for PotHoleRaja (Bangalore road-repair NGO)

Azure & AWS Cloud Fundamentals

01/2023

Built MS-GGR hackathon solutions using Azure SQL Database, Storage, Computer Vision OCR, and ML Studio, plus AWS Lambda, S3, EC2, IAM, and DynamoDB.
